

1.assign a price for item 'a'

```
a<-53 a
```

```
b<-60 b
```

2.calculate the total price of item a and b

```
a+b
```

3.calculate the remaining amount of products left after returned

```
c<-6 d<-3 c%%d
```

4.remove a certain animal from the shop

```
e<- 'cat' rm(e)
```

5.print the sq root of following no of biscuit baked

```
sqrt(169)
```

6.round of the total value of product to nearest number

```
as.integer(52.3)
```

7.print the given number is integer or not

```
c<-19L is.integer(c)
```

8.print if their is a numeric or not

```
x<-c('a','b','1') as.numeric(x)
```

9.print a simple matric for construction purpose

```
m<-matrix(nrow = 2,ncol = 3) m
```

10.print the total number of pencils in list

```
r<-1:10 r
```

11.print the dimension for the above pencil

```
p<-matrix(1:6,nrow = 3,ncol = 2) p dim(p)
```

12.print the listed pencil in matrix form

```
dim(r)<-c(5,2) r
```

13.print a matrix of notebooks of certain count

```
t<-1:3 u<-10:12 cbind(t,u)
```

14.print the total number of yes or no of the scale

```
f<-factor(c('yes','yes','no','yes','no')) f table(f)
```

15.print the no of products in items arrived from shop in table

```
h<-factor(c("milk","biscuit","pen","rubber"),levels=c("pen","rubber","milk","biscuit")) h table(h)
```

16.print the yes or no in the missing list of sweets

```
k<-c(1,NaN,NA,10,3) is.na(k) is.nan(k)
```

17.print a data with t or f

```
l<-data.frame(s=1:4,bar=c(T,T,F,F)) l
```

18.print the total no of rows for above

```
nrow(l)
```

19.print the total no of column for above

```
ncol(l)
```

20.print the values in list individually

```
i<-list(1,'a',TRUE,1+4i) i
```
